

ABSTRACT OF THE DISCLOSURE

Creating a dynamic Internet link includes storing terms associated with a bookmarked Internet resource in a bookmark entry, storing a resource name associated with the bookmarked Internet resource in the bookmark entry, and storing a locator identifier associated with the bookmarked Internet resource in the bookmark entry. Updating the dynamic Internet bookmark when the bookmarked Internet resource has changed location by performing a search using stored terms to obtain search results, comparing resource names of resources from the search results from the performed search with the stored resource name of the bookmarked Internet resource to obtain a matching resource having the same resource name, and storing a new locator identifier of the matching resource in the bookmark entry.
